# **SHOCK (NON-TRAUMATIC)**

## I. FIELD ASSESSMENT/TREATMENT INDICATORS

- Patient exhibits signs/symptoms of profound shock and hypotension with a SBP of less than 90 mm Hg for adults and a SBP less than 70 mm Hg for pediatrics.
- Determine history of illness.
- History of GI bleeding, vomiting, diarrhea, fever/sepsis or vaginal bleeding.
- Post ROSC for Out of Hospital Cardiac Arrest (OHCA).
- Consider hypoglycemia or narcotic overdose.

## II. LIMITED ALS (LALS) INTERVENTIONS

- Maintain airway with appropriate adjuncts, including perilaryngeal airway adjunct if indicated.
- Obtain O<sub>2</sub> saturation on room air or on home oxygen if possible.
- Place AED pads on patient as precaution in event patient goes into sudden cardiac arrest.
- Obtain vascular access.
- If hypotensive or have signs or symptoms of inadequate tissue perfusion, administer fluid challenges:

### ➤ ADULT

Administer 500 ml IV bolus, may repeat one (1) time until tissue perfusion improves

#### PEDIATRIC

Administer 20 ml/kg IV bolus, may repeat one (1) time for tachycardia, change in central/peripheral pulses or altered level of consciousness.

Shock (Non-Traumatic)

REFERENCE: 9130
Page 2 of 3

• For patients with no respiratory difficulties and adequate signs of tissue perfusion:

### ➤ ADULT/PEDIATRIC

Maintain IV at TKO.

### III. ALS INTERVENTIONS

- Perform activities identified in LALS Interventions.
- Maintain airway with appropriate adjuncts, including advanced airway if indicated. Obtain O<sub>2</sub> saturation on room air or on home oxygen if possible.
- Place on cardiac monitor.
- Obtain vascular access.
- If hypotensive or has signs or symptoms of inadequate tissue perfusion, administer fluid challenges:

### > ADULT

- Administer 500 ml IV bolus, may repeat one (1) time to sustain a SBP of more than 90 mm Hg or until tissue perfusion improves.
- If no response to fluid administration, stop fluids and administer Push Dose Epinephrine per ICEMA reference #7040 Medication Standard Orders.

### PEDIATRIC

- Administer 20 ml/kg IV bolus, may repeat one (1) time for tachycardia, change in central/peripheral pulses or altered level of consciousness.
- If no response to fluid administration, stop fluids and administer Push Dose Epinephrine per ICEMA reference #7040 Medication Standard Orders.
- For adults with sustained SBP of more than 90 mm Hg, pediatrics with sustained SBP more than 70 mm Hg, no respiratory difficulties and adequate signs of tissue perfusion:

### ➤ ADULT

Maintain IV at TKO.

REFERENCE: 9130 **Shock (Non-Traumatic)** 

Page 3 of 3

#### **PEDIATRIC**

Maintain IV at TKO.

# **Base Hospital May Order**

Establish 2<sup>nd</sup> large bore IV en route.
